

Filtered by log level

```
console.error("This is an error message showing that the name of the pet  
is not valid: ");
```

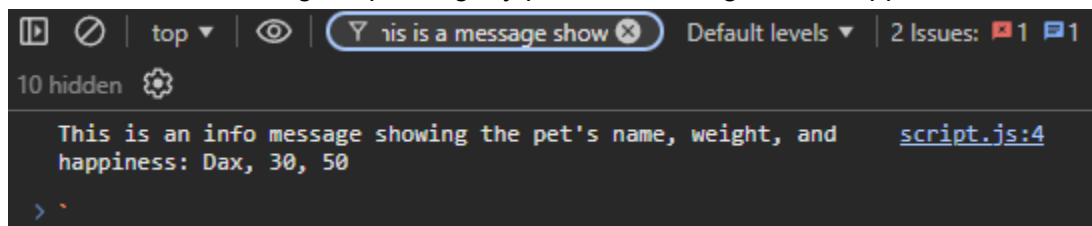

This shows the error messages and the main one shows that the name is not valid

Filtered by text

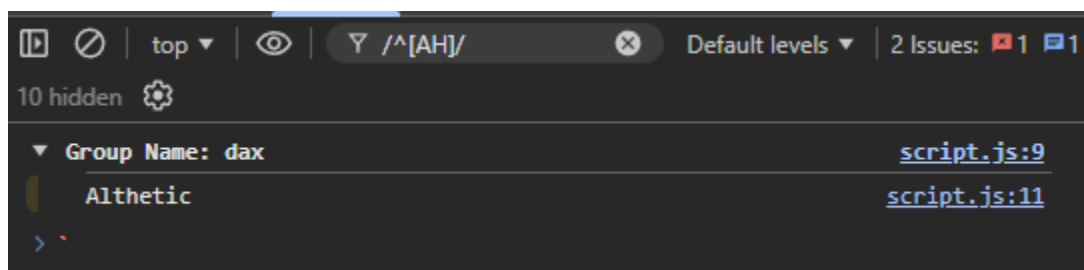

```
tconsole.info("This is an info message showing the pet's name, weight, and happiness: " +  
pet_info.name + ", " + pet_info.weight + ", " + pet_info.happiness );
```

I made this info message explaining my pets name, weight, and happiness level

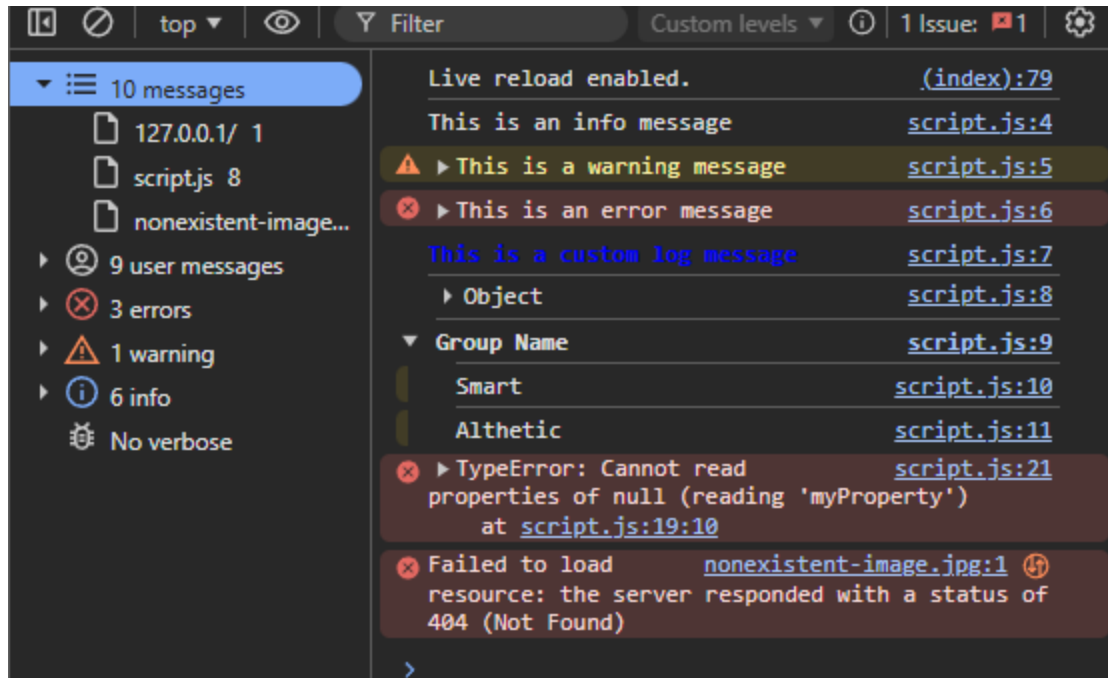

Filtered by regular expression

It shows all characters from A to H and in this case "Athletic" fits the description. It uses the following filter `/^[AH]/`

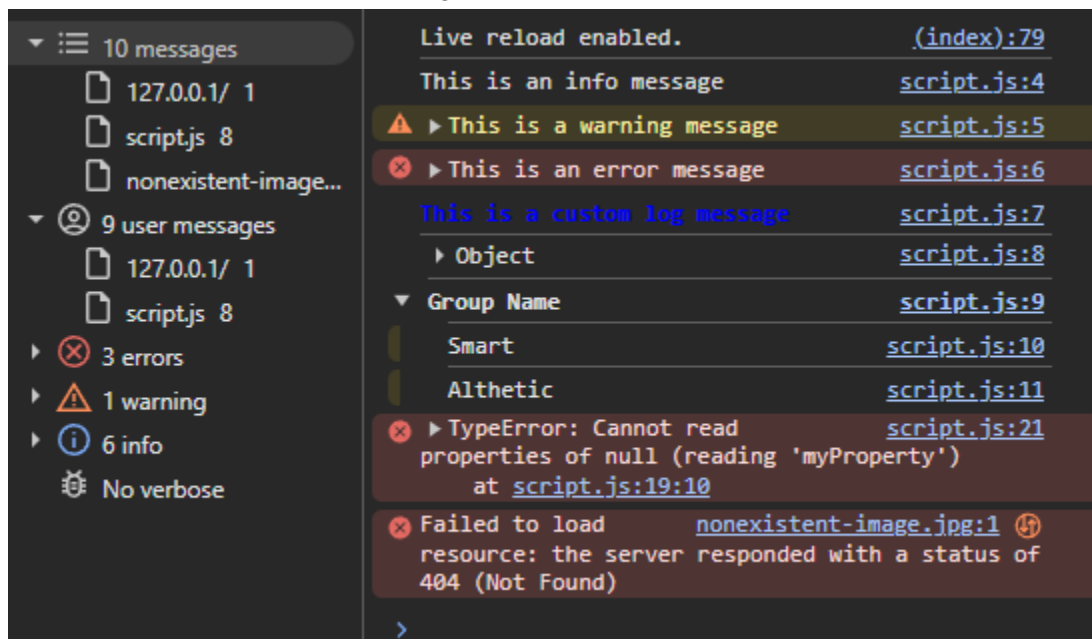

Filtered by message source

Messages that come from, URL source, [script.js](#) causes 10 messages

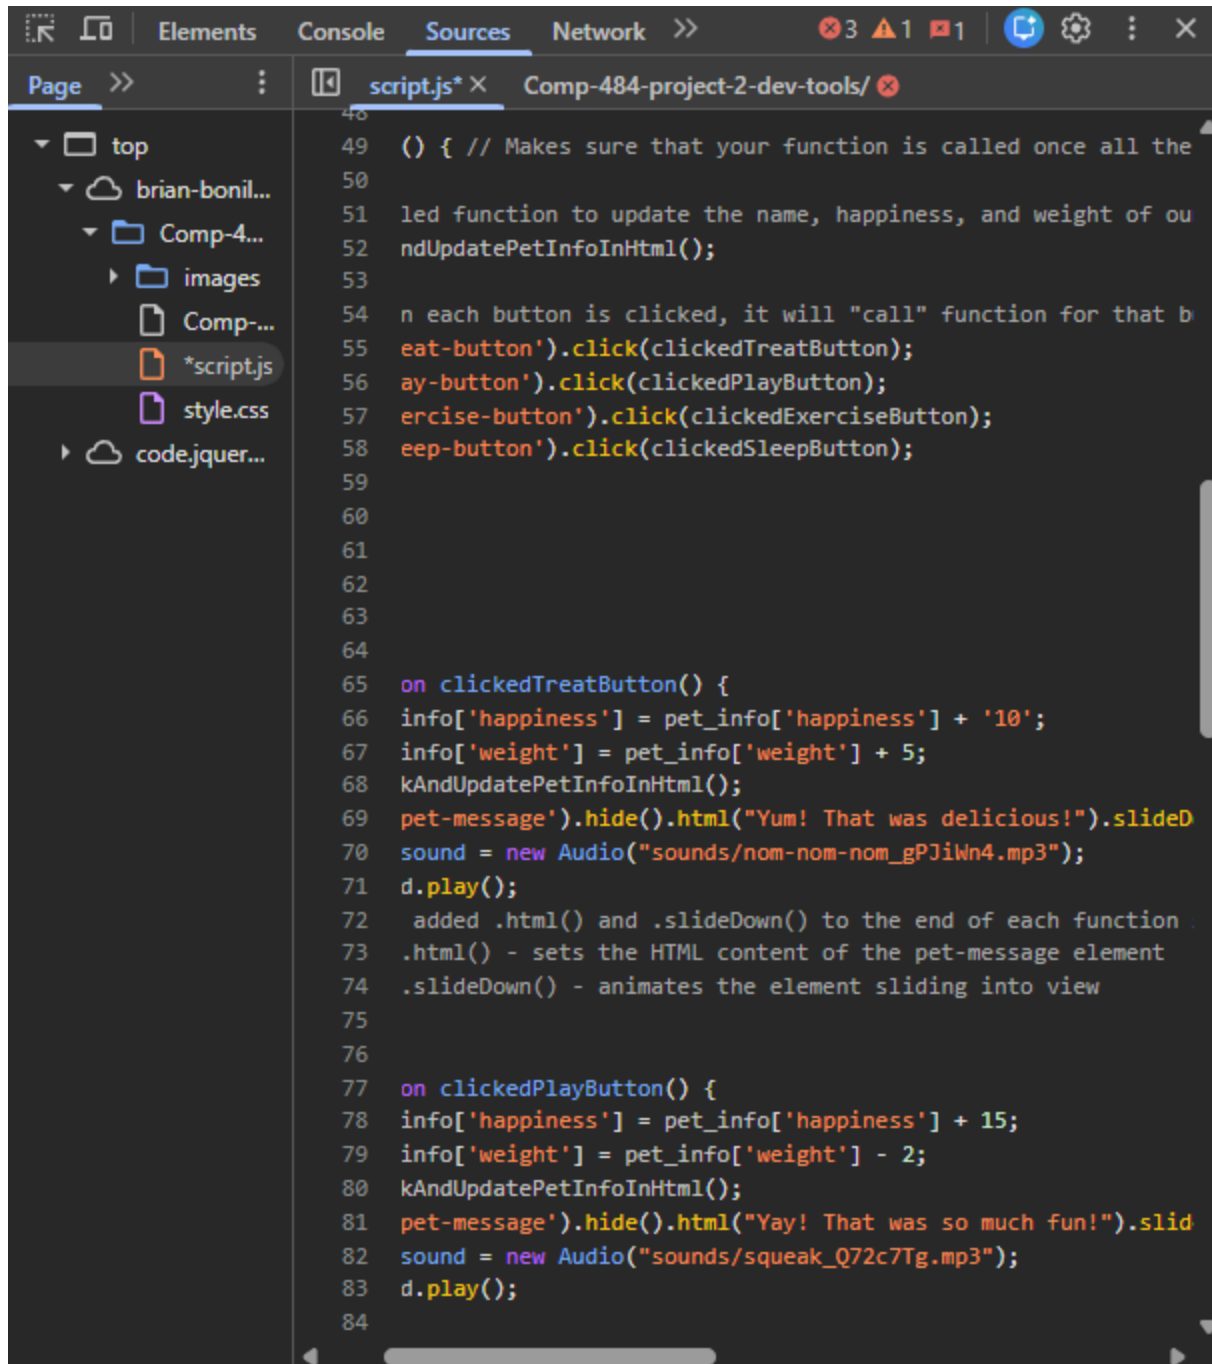

Filtered by use messagers

Shows that there is 8 user messages

Reproduce a bug

In this section, I modified the code and it reproduces a bug that changes to a concatenation of 5010 instead of the sum 60. I went and saw it on devtools

Get familiar with DevTools

Similar to the previous one, I opened devtools and looked around to check my js code and see what I can do to fix it.

() { // Makes sure that your function is called once all the

led function to update the name, happiness, and weight of ou

ndUpdatePetInfoInHtml();

n each button is clicked, it will "call" function for that b

eat-button').click(clickedTreatButton);

ay-button').click(clickedPlayButton);

ercise-button').click(clickedExerciseButton);

leep-button').click(clickedSleepButton);

on clickedTreatButton() {

info['happiness'] = pet_info['happiness'] + 10;

info['weight'] = pet_info['weight'] + 5;

kAndUpdatePetInfoInHtml();

pet-message').hide().html("Yum! That was delicious!").slideD

sound = new Audio("sounds/nom-nom-nom_gPjIwn4.mp3");

d.play();

added .html() and .slideDown() to the end of each function :

.html() - sets the HTML content of the pet-message element

.slideDown() - animates the element sliding into view

on clickedPlayButton() {

info['happiness'] = pet_info['happiness'] + 15;

info['weight'] = pet_info['weight'] - 2;

kAndUpdatePetInfoInHtml();

pet-message').hide().html("Yay! That was so much fun!").slid

sound = new Audio("sounds/squeak_Q72c7Tg.mp3");

d.play();

{ }

Pause the code with a breakpoint

To test the code without using `console.log()` we use the debugger in the devtools. I tried with my “Treat” buttons and it stopped to test it just in that section.

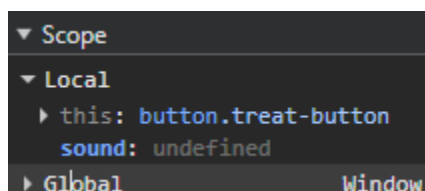

Set a line-of-code break

In this, we use our own code to and we click the line number in which we want to make a pause to test the code. In this case, I paused on give a treat button so it stops.

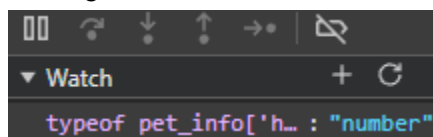

Check variable values: The scope panel

In this section, i use the scope panel to check the previously mentioned paused section and see the variables.

Watch Expression

In this section, we use the watch tab to add an expression. I added `typeof pet_info['happiness']` and it gave back a number

The Console

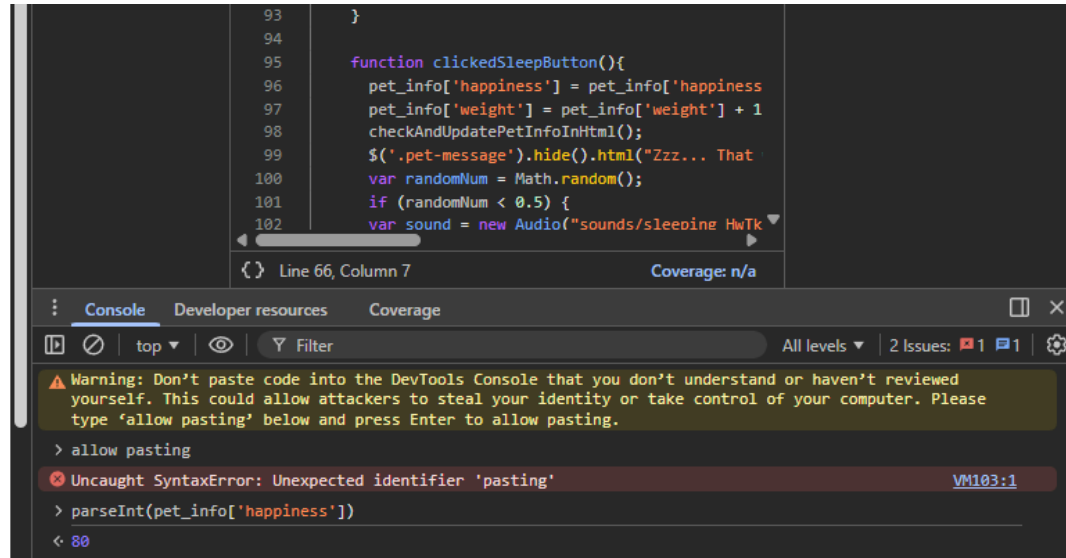

In this part, we use the console to check if our numbers are correctly showing in the browser.

Happiness: 80
tail wags (per
min)
Yum! That was
delicious!

Apply a fix

In this last section, we apply a fix in our current bug which was our happiness not being added correctly. Instead it was a concatenation of 5010. I went and fixed it and now it adds up correctly. Since its been tested multiple times, it has noow added up to 90.

Name: Dax
Weight: 50 pounds
Happiness: 90 tail wags
(per min)
Yum! That was
delicious!
